1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

**Abstract:**

Line 8, after "transistor.", --One embodiment includes the low voltage pull-down circuit in a power supervision circuit for systems that operate with, for example, low power conditions. The open-drain node is utilized as power-on-reset node that provides a low logic signal to a system when the power being supplied to the system is below a predetermined voltage threshold.--

***Allowable Subject Matter***

1. The following is an examiner's statement of reasons for allowance: the amendment filed 4/5/2005 has overcome the prior art of record and the technical deficiencies. The prior art of record fails to teach or fairly suggest a control node (V<sub>up</sub> of figure 2), wherein said output node is pulled up to a logic high voltage when a logic high voltage is applied to said control node as called for in claim 1, a third sub circuit comprising a fourth and fifth NMOS transistors coupled to the input node and the ground terminal as called for in claim 18, a pull down transistor coupled to said first sub circuit, wherein said output node is pulled up when a voltage high is applied to the gate terminal of said pull down transistor (transistor 242 of figure 2), an intermediate node, a resistor, a first PMOS switch, wherein the source terminal of said first PMOS switch is coupled to said input node, the gate terminal of said first PMOS switch is

coupled to said intermediate node, and the drain terminal of said first PMOS switch is coupled to the source terminal of said first NMOS transistor as called for in claim 26, a current mirror coupled to said first sub circuit for controlling the amount of current at said output node as called for in claim 27, an electrostatic discharge cell coupled to said first and second sub circuits as called for in claim 28, a second sub circuit comprises third and fourth NMOS transistors, wherein the threshold voltage of the third and fourth transistors is greater than the threshold voltage of the first and second NMOS transistors, the threshold voltage of the fifth transistor is greater than the threshold voltage of the third and fourth transistors as called for in claim 30, a plurality of inputs, a plurality of power supervision circuits, wherein each one of said plurality of power supervision circuits is coupled to one of said plurality of inputs, each one of said plurality of power supervision circuits is coupled to said output, a logic low is placed on said output when the voltage of at least one of said plurality input is below at least one predetermined voltage level as called for in claims 31 and 32. Therefore, claims 1-10 and 18-32 are presently allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
